Note also, that the Exchequer openeth
eight dayes before any Terme begin (ex-
cept Trinity Terme) in which it openeth
but fower dayes before.

*A true Description of the foure
Quarters of this yeare.
And first of Winter.*

○.in v^p m. x.

VV Inter (according to our English accompt) began the last passed yeare 1630. the twelfth day of December; at which time the Sunne entred into the first minute of the Celestiall Signe Capricorne, making the shortest day and longest night in the yeare; which Quarter is naturally cold and moist. When the Sunne is in Capricorne, cold reigneth more then moysture: And in Aquarius, it is equally cold and moyst: The Sunne being in Pisces, it is more moyst then cold; and for the most part, store of wiad is stirring, especially in the midst of Winter.

The Diseases subiect to this Quarter, are colde Flegmaticke and Melancholly

B z

sickneses;

A Prognostication.

sicknesse, as Scabs, sore eyes, melancholy, Rheumes, Coughes, Cathars, Sciaticaes, much sicknesse amongst Women, &c.

For the iudgement of the weather, you may see it in the daily disposition of each moneth hereafter following.

Of the second Quarter of the yeare, called the Spring.

☉ in ♋. 8. II.

THe Spring (according to our Astronomicall account) begins vpon the tenth day of March, when the Sunne entereth the first minute of Aries, making the Vernall Equinoctiall, the dayes and nights of equall length throughout the whole world; and in generall, is of nature hot and moyst, but very vnconstant, as sometimes hot, and sometimes cold. The cold of Winter is now diminished, and the powers of the Earth which haue bene long shut vp and bound with cold, are now loosened, by reason of the Sunnes approaching toward our Verticall Circle; and moysture often falleth by reason of the necrenesse of Winter. In the beginning (the
Sunne

Dade. 1631.

Sunne being in Aries) the weather inclineth more to moysture then heate, and in the middle (the Sunne being in Taurus) it is equall for heate and moysture, as sometimes hot, and sometimes shewry; and in the end of this Quarter (the Sunne being in Gemini) it is more hot then moist. In this Quarter vsually there are many soudaine stormes of wind, by reason of the meane temperature of the ayre.

The sicknettes of this Quarter, are small Pocks, Measells, Scabs, many hot diseases proceeding of corrupt Blood, as Fevers, &c.

*Of the third part of the yeare called
Summer.*

☉ in ♋ ♌ ♍.

Summer beginneth the twelfth day of June, at that time when the Sunne entereth into the first minute of Cancer, and finisheth his greatest North declination, making the longest day and shortest night in the yeare. This Quarter (according to his naturall disposition) is hot and dry. In the beginning (the Sunne being in Cancer)

A Prognostication.

cer) heate ruleth more then drinesse: and in the middle (the Sun being in Leo) it is more dry then hot: And for the most part there are small store of windes stirring this Quarter, especially in the midst of Summer.

The Diseases of this Quarter, are hot burning Agues, Scabbs, Pustles, laundies, grieffe of the head and backe, &c.

Of the fourth part of the yeare, called Autumne, or Fall of the Lease.

☉ in ♎ m. 7.

HArvest, or Autumne, (being our last Astronomical Quarter of this yeare) beginneth at the entrance of the Sunne into the first minute of Libra, making the dayes and nights of equall length. which happeneth vpon the thirteenth day of September.

This Quarter according to his naturall quality) is cold and dry: The Sunne being in Libra is more dry then cold: And the Sunne in Scorpio, is equally cold and dry: And in the latter end (the Sun being in Sagitary) it is more cold then dry.

In

Dade. 1631.

In Autumn (as in the Spring) there are many boysterous windes often stirring, and it is dangerous for most Diseases, which are now apt to be taken, and now there is least remedie for the same.

The Sickneses of this Quarter are divers, as Crampes, Tooth-ach, Rhumes, Hoarsenesse, Coughes, Melancholy, Fluxes of blood, Falling sicknesse, grieve in the Backe and Kidnies, &c.

*Two Eclipses of the Moone, that
happen this yeare 1631.*

THE first is upon the fifth day of May, being Thursday, halfe an houre past five of the clocke at night.

The second Eclipse upon the 29 day of October being Tuesday, about halfe an hower past seven of the clocke at night.

A brieſe deſcription how the Planets
are Placed about the Earth in the Skie, for
euery moneth after Sunne ſetting, or before his
riſing, by which you may perceiue how they keepe
their motion day and night all the yeare. Moreo-
uer, the new, full and Quarters of the Moone;
with Aſtrologiſcall iudgement of the wea-
ther for each day of the yeare. Allo
husbandry inſtructions for each
Moneth of the yeare.

Of Ianuarie.

Saturne is paſt mid-heauen at Sun-ſet.
Iupiter is neere mid-heauen at Sun-riſing
Mars and Venus ſet a while after the Sun.
Mercury ſets a while after Mars and Venus.
